

# **Infinity Coupled With Infinity, In A Finite Time And Space**

By Kevin A. Sensenig

Draft 1.01

2019 January 31

I have an interesting observation, that I unpacked as part of my Zen some years ago. It's this.

If you move your index finger from point A to point B (integers) on a piece paper, it's infinity (time, the real numbers) coupled with infinity (space, the real numbers) in a finite time and space.

! So this also is the actual world, and seems to be consistent with the Tao, or the Way.

It's a most fascinating thing to me. How wonderful and participant the world is, in this way! Even a small gesture.... Of one's finger or hand, or the placement and movement of a tree.

This is also consistent with the infinite point.
