

For Review – 4 Essential Questions On The Mind And Mutability

Kevin A. Sensenig Draft 1.01-L 2025 November 12

There are the following statements and questions one might reasonably state.

- ___ The molecule can affect the mind. And modify it.
- ___ What of the mind can someone change by self-reflection and its affirmations or edits?
- ___ What is informed by logic, culture, or original thought or sense of being or sense of place?
- ___ Is the brain mutable – does it develop new and different mental states, mental facts, and mental experiences? Does it reformulate apperception? The brain or the mind?

What then of the reality of treatment or approach A, B, C, or D? What is the content of that and the ontological, epistemological, individual, community, culture, positionality, cosmos space and fact and reality?

This is a totality, integrative, nondual, boundless-space description pointing to that within treatment or approach A, B, C, or D that is the same or part of (a point in) the same.
